PROFILE

Software engineer with 2 years shipping and operating production microservices on **Kubernetes** and **AWS**. Hands-on across the delivery pipeline — **Docker**, **GitHub Actions** CI/CD, **RabbitMQ**, **Redis**, and observability with **Prometheus** and **Jaeger**. Looking to move into a DevOps / Platform Engineering role to own infrastructure and reliability end-to-end.

EDUCATION

University of Ruhuna

Bachelor of Computer Science

2020 – Dec. 2025

Matara, Sri Lanka

Rahula College Matara

GCE Advanced Level – Mathematics: A | Physics: C | Chemistry: C

Matara, Sri Lanka

WORK EXPERIENCE

D B International Technology

Associate Software Engineer

Apr. 2025 – Present

Sri Lanka

- Helped operate a **Gaming Platform** micro-service backend on **Kubernetes** — API gateway fronting account and lobby services over **RabbitMQ**; containerized services with **Docker** and contributed to deployment configs, auth proxying, and edge rate-limiting.
- Built a **batch ingestion pipeline** for the **Digital Scratch Card** game that generated ~**130M** tickets into **PostgreSQL** with weight-table validation and automatic regeneration on integrity failure — tuned for throughput and data correctness.
- Operated a real-time **Socket.IO** broadcast service (Chicken Road Crash) with **RabbitMQ** event fan-out for round-state distribution to many concurrent clients.

CeylonX Corporation

Associate Software Engineer

Dec. 2024 – Mar. 2025

Sri Lanka

- Owned end-to-end **AWS** deployments with **GitHub Actions** CI/CD triggered on push — managed pre-prod to prod rollouts, environment configuration, and secrets across multiple services.
- Operated streaming infrastructure for **Susila** (subscription VOD) — delivered video over **HLS (m3u8)** with **Vimeo** as origin for concurrent viewers; integrated **Stripe** webhooks and **Firebase Cloud Messaging**.

CeylonX Corporation

Intern Software Engineer

Jun. 2024 – Dec. 2024

Sri Lanka

- Implemented the **PayHere** MD5-signed redirect + server-to-server notify-webhook flow with signature verification and **idempotent** success lookups for safe payment retries.
- Maintained a production **restaurant POS** running at multiple sites — monitored uptime, debugged production issues, and shipped fixes; promoted to Associate after 6 months.

PROJECTS

NestJS Microservices Platform: Gateway + Auth + User | *Docker, RabbitMQ, PostgreSQL, Redis, Prometheus, Jaeger*

- Self-initiated 3-service backbone — containerized with **Docker Compose**, communicating over **RabbitMQ** with **dead-letter queues**, idempotency keys, per-service **circuit breakers**, retries, and **Redis** caching.
- Observability: **Prometheus** metrics and **Jaeger** distributed tracing across services for end-to-end request visibility.
- [API Gateway](#) | [Auth Service](#) | [User Service](#)

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, S3, IAM), Linux (Ubuntu), Networking fundamentals

Containers & CI/CD: Docker, Docker Compose, Kubernetes, GitHub Actions, Bash, Git

Messaging, Caching & Observability: RabbitMQ, Redis, Socket.IO, Prometheus, Jaeger

Databases: PostgreSQL, MySQL, MongoDB, Firebase

Languages & Stack: TypeScript, JavaScript, Bash; Node.js, NestJS, Express, React, Next.js

Working Knowledge: Kafka, Java, C#, Python, PHP, Spring Boot, ASP.NET Core

CERTIFICATIONS

AWS Educate – Introduction to Cloud | *Amazon Web Services* | [View on Credly](#)
